For latest Parts manual or other language Operator manual, visit:
www.tennantco.com/manuals
INTRODUCTION

This manual is furnished with each new model. It provides necessary operation and maintenance instructions. 

Read this manual completely and understand the machine before operating or servicing it.

This machine will provide excellent service. However, the best results will be obtained at minimum costs if:

- The machine is operated with reasonable care.
- The machine is maintained regularly - per the machine maintenance instructions provided.
- The machine is maintained with manufacturer supplied or equivalent parts.

PROTECT THE ENVIRONMENT

Please dispose of packaging materials, old machine components and fluids in an environmentally safe way according to local waste disposal regulations. 

Always remember to recycle.

MACHINE DATA

Please fill out at time of installation for future reference.

SAFETY PRECAUTIONS

The following precautions are used throughout this manual as indicated in their description:

**WARNING:** To warn of hazards or unsafe practices which could result in severe personal injury or death.

**FOR SAFETY:** To identify actions which must be followed for safe operation of equipment.

The machine is suited to sweep disposable debris. Do not use the machine other than described in this Operator Manual.

The following information signals potentially dangerous conditions to the operator or equipment:

**FOR SAFETY:**
1. Do not operate machine:
   - Unless trained and authorized.
   - Unless operation manual is read and understood.
   - Under the influence of alcohol or drugs.
   - While using a cell phone or other types of electronic devices.
   - Unless mentally and physically capable of following machine instructions.
   - If it is not in proper operating condition.
   - In areas where flammable vapors/liquids or combustible dusts are present.
   - In areas that are too dark to safely see the controls or operate the machine unless operating / headlights are turned on.
   - In flammable or explosive areas unless designed for use in those areas.

2. Before starting machine:
   - Check for fuel leaks.
   - Keep sparks and open flame away from refueling area.
   - Make sure all safety devices are in place and operate properly.
   - Check brakes and steering for proper operation.
   - Adjust seat and fasten seat belt.

3. When starting machine:
   - Keep foot on brake and directional pedal in neutral.

4. When using machine:
   - Use only as described in this manual.
   - Do not pick up burning or smoking debris, such as cigarettes, matches or hot ashes.
   - Use brakes to stop machine.
   - Reduce speed when turning.
   - Keep all parts of body inside operator station while machine is moving.
   - Always be aware of surroundings while operating machine.
   - Use care when reversing machine.
   - Move machine with care when hopper is raised.
   - Make sure adequate clearance is available before raising hopper.
   - Do not raise hopper when machine is on an incline.
   - Keep children and unauthorized persons away from machine.
   - Use brakes to stop machine.
   - Reduce speed when turning.
   - Keep all parts of body inside operator station while machine is moving.
   - Always be aware of surroundings while operating machine.
   - Use care when reversing machine.
   - Move machine with care when hopper is raised.
   - Make sure adequate clearance is available before raising hopper.
   - Do not raise hopper when machine is on an incline.
   - Keep children and unauthorized persons away from machine.
   - Go slow on inclines and slippery surfaces.
   - Use care when reversing machine.
   - Do not carry riders on machine.
   - Always follow safety and traffic rules.
   - Report machine damage or faulty operation immediately.

5. Before leaving or servicing machine:
   - Do not park near combustible materials, dust, gases, or liquids.
   - Stop on level surface.
   - Set parking brake.
   - Turn off machine and remove key.

6. When servicing machine:
   - Avoid moving parts. do not wear loose jackets, shirts, or sleeves.
   - Block machine tires before jacking machine up.
   - Jack machine up at designated locations only. Block machine up with jack stands.
   - Use hoist or jack that will support the weight of the machine.
   - Do not push or tow the machine without an operator in the seat controlling the machine.
   - Do not power spray or hose off machine near electrical components.
   - Wear eye and ear protection when using pressurized air or water.
   - Disconnect battery connections before working on machine.
   - Avoid contact with battery acid.
   - Avoid contact with hot engine coolant.
   - Do not remove cap from radiator when engine is hot.

For cleaning machines, parts & supplies click/visit www.southeasternequipment.net
SAFETY PRECAUTIONS

- Allow engine to cool.
- Keep flames and sparks away from fuel system service area. Keep area well ventilated.
- Use cardboard to locate leaking hydraulic fluid under pressure.
- All repairs must be performed by trained personnel.
- Do not modify the machine from its original design.
- Use Tennant supplied or approved replacement parts.

7. When loading/unloading machine onto/off truck or trailer:
   - Turn off machine.
   - Use truck or trailer that will support the weight of the machine.
   - Use winch. Do not drive the machine onto/off the truck or trailer unless the load height is 380 mm (15 in) or less from the ground.
   - Set parking brake after machine is loaded.
   - Block machine tires.
   - Tie machine down to truck or trailer.
   - Wear personal protective equipment as needed and where recommended in this manual.

8. When loading/unloading machine onto/off truck or trailer:
   - Empty debris hopper before loading machine.
   - Turn off machine and remove key.
   - Use ramp, truck or trailer that will support the weight of the machine and operator.
   - Do not load/unload on ramp inclines that exceed 11% grade.
   - Use winch. Do not drive the machine onto/off the truck or trailer unless the load height is 380 mm (15 in) or less from the ground.
   - Set parking brake (if equipped) after machine is loaded.
   - Block machine tires.
   - Tie machine down to truck or trailer.

[WARNING: Machine can emit excessive noise. Consult with your regulatory agency for exposure limits. Hearing loss can result. Wear hearing protection.]

[WARNING: Raised hopper may fall. Engage hopper support bar.]

[WARNING: Raised hopper may fall. Engage hopper support pin.]

[WARNING: Brush linkage pinch points. Stay clear when linkage is moving.]

[WARNING: Side brush can move. Do not step on side brush.]

[WARNING: Hopper door pinch point. Stay clear of hopper door.]

[WARNING: High dump vertical clearance. Stay clear of overhead obstructions and power lines.]

[WARNING: Conveyor throws debris. Conveyor pinch point. Stay clear when in operation.]

[WARNING: Flammable materials can cause explosion or fire. Do not use flammable materials in tank. Only use water.]

[WARNING: Engine emits toxic gases. Severe respiratory damage or asphyxiation can result. Provide adequate ventilation. Consult with your regulatory agency for exposure limits. Keep engine properly tuned.]

[WARNING: Lift arm pinch point. Stay clear of hopper lift arms.]

[WARNING: Raised cab may fall. Engage cab support bar.]

[WARNING: Do not spray people or animals. Severe personal injury can result. Wear eye protection. Hold sprayer with two hands.]

Warning: This product contains chemicals known to the state of California to cause cancer, birth defects, or other reproductive harm.
SAFETY PRECAUTIONS

The following safety labels are mounted on the machine in the locations indicated. If these or any label becomes damaged or illegible, install a new label in its place.

**EMISSIONS LABEL** – Located on the upper console.

**HIGH DUMP LABEL** – Located on the upper console.

**FOR SAFETY LABEL** – Located on the upper console.

**HIGH PRESSURE SPRAY HAZARD LABEL** – Located on the frame of machine.

**HOPPER DOOR LABEL** – Located below the hopper door.

**RAISED CAB LABEL** – Located below the cab on the frame.

**SIDE BRUSH LABEL** – Located above the side brush(es).

**BRUSH LINKAGE LABEL** (VARIO SWEEPING BRUSH) – Located on the front of the machine.
SAFETY PRECAUTIONS

HOPPER SUPPORT PIN LABEL – Located on both sides of the support pin. On low dump models, one is located on the upper support cylinder. On high dump models, one is located on the drivers side of the hopper lift.

CONVEYOR LABEL – Located at the back of the conveyor.

FLAMMABLE MATERIALS LABEL (Wet Dust Control Option) – Located on the drivers side below the water fill spout.

VACUUM WAND OPTION NOISE LABEL – Located on the vacuum wand.

HOPPER SUPPORT BAR LABEL (High Dump) – Located on both sides of the support bar, on the rear center of the hopper lift, and on both sides of the hopper lift.

LIFT ARMS LABEL (High Dump) – Located on the side of the hopper lift.

For cleaning machines, parts & supplies click/visit www.southeasternequipment.net
OPERATOR RESPONSIBILITY

☐ The operator's responsibility is to take care of the daily maintenance and checkups of the machine to keep it in good working condition. The operator must inform the service mechanic or supervisor when the required maintenance intervals occur as stated in the MAINTENANCE section of this manual.

☐ Read this manual carefully before operating this machine. View the operation video supplied with the machine.

FOR SAFETY: Do not operate machine, unless operation manual is read and understood.

☐ Check the machine for shipping damage. Check to make sure machine is complete per shipping instructions.

☐ Keep your machine regularly maintained by following the maintenance information in this manual. We recommend taking advantage of a regularly scheduled service contract from your TENNANT representative.

☐ Order parts and supplies directly from your authorized TENNANT representative. Use the parts manual provided when ordering parts.

☐ The model SENTINEL has a GVWR of 9072 kg (20,000 lb) or 4536 kg (10,000 lb) per axle. Operate only on surfaces capable of supporting this weight.
MACHINE COMPONENTS

A. Cab
B. Diesel Engine
C. Conveyor
D. Hopper
E. Dust Filters
F. Vacuum Fan
G. Hopper Door

H. Radio And Cassette Player (Option)
OPERATION OF CONTROLS

OPERATOR SEAT

The operator seat has two adjustments. The adjustments are for the front to rear seat position and ride stiffness.

NOTE: The machine will not propel unless the operator is in the seat.

The seat front-to-rear position is adjusted by the seat position lever.

Adjust: Push the lever to the left, slide the seat backward or forward to the desired position and release the lever.

The ride stiffness is adjusted with the stiffness knob.

Adjust: Turn the knob clockwise to increase the ride stiffness, and counter-clockwise to decrease the ride stiffness.

SEAT BELTS

The seat belts are located on each seat. Always fasten the seat belts and adjust them for proper fit before operating the machine.
OPERATION

STEERING WHEEL
The steering wheel controls the machine’s direction. The machine is very responsive to the steering wheel movements.

Left: Turn the steering wheel to the left.
Right: Turn the steering wheel to the right.

NOTE: The machine has 4-wheel steering. Watch the swing of the rear corners of the machine when turning.

STEERING WHEEL TILT LEVER (For machines serial number 007053 and below)
The steering wheel tilt lever is used to adjust the angle of the steering wheel. To tilt the steering wheel, pull the lever slightly downward and toward the operator seat. Position the steering wheel at the desired position, then release the lever.

STEERING WHEEL TILT LEVER (For machines serial number 007054 and above)
The steering wheel tilt lever, located under the steering boot, is used to adjust the angle of the steering wheel. To tilt the steering wheel, push straight in on lever under the boot. Position the steering wheel at the desired position, then release the lever.
OPERATION

PARKING LIGHTS, HEADLIGHTS, BRIGHT HEADLIGHTS, SIGNAL, AND HORN SWITCH

The parking lights, headlights, bright headlights, signal, and horn switch controls the parking lights, headlights, signals, and horn.

Parking and Headlights On: Rotate the switch knob counter-clockwise.

Parking Lights On: Turn the switch knob to the first click.

Headlights On: Turn the switch knob to the second click.

Bright Headlights On: Push the switch lever down.

Bright Headlights Off: Pull the switch lever up.

Flash Bright Headlights: Pull the switch lever up, then release.

Signals: Push the switch lever forward for the right signal. Pull the switch lever back for the left signal.

Horn: Push the switch end towards the steering column.

WINDSHIELD WIPER AND WASHER SWITCH

The windshield wiper and washer switch controls the windshield wipers and windshield washer fluid spray.

Windshield Wipers Off: Push the lever all the way down.

Windshield Wipers Slow Speed: Pull the switch lever to the first position.

Windshield Wipers Slow Speed: Pull the switch lever to the second position.

Windshield Washer Fluid Spray: Push the switch lever end in.
**OPERATION**

**IGNITION SWITCH (For machines serial number 007709 and below)**

The ignition switch starts and stops the engine with a key. When the ignition switch is turned off, the parking brake will come on automatically.

Preheat: Turn the key counter-clockwise. The glow plugs light will come on. When the glow plug light goes out, usually for 5 to 30 seconds depending on the weather conditions, the engine is ready to start.

**NOTE:** The preheat is not necessary if the temperature is above 10°C (50°F).

Start: Turn the key all the way clockwise. Release the key as soon as the engine starts.

Stop: Turn the key counter-clockwise.

**IGNITION SWITCH (For machines serial number 007710 and above)**

The ignition switch starts and stops the engine with a key. When the ignition switch is turned off, the parking brake will come on automatically.

Preheat: Turn the key counter-clockwise. The glow plugs light will come on. When the glow plug light goes out, usually for 5 to 30 seconds depending on the weather conditions, the engine is ready to start.

**NOTE:** The preheat is not necessary if the temperature is above 10°C (50°F).

Start: Turn the key all the way clockwise. Release the key as soon as the engine starts.

Stop: Turn the key counter-clockwise.

**PROPELLING PEDAL**

The propelling pedal controls the propelling speed of the machine. You change the speed of the machine with the pressure of your foot; the harder you press the pedal, the faster the machine travels. The travel speed is indicated with the speedometer. See the SPEEDOMETER section of this manual.

**NOTE:** The machine's travel speed is limited to 5 mph when the hopper is tilted or raised.
**BRAKE PEDAL**

The brake pedal stops the machine.

**NOTE:** The hopper lift and tilt switches will not operate unless the parking brake is set or the service brake is applied.

**Stop:** Take your foot off the propelling pedal and step on the brake pedal.

---

**ACCESSORY POWER SOCKET**

The accessory power socket can be used as a cigarette lighter or as an electrical accessory power outlet.

---

**DIRECTIONAL LEVER**

The directional lever controls the forward-reverse direction of travel of the sweeper.

**Neutral:** Place the lever in the middle, or Neutral position.

**FOR SAFETY:** When starting machine, keep foot on brake and directional lever in neutral.

**Forward:** Push the lever up into the Forward position.

**NOTE:** Machine will not start unless the directional lever is in the neutral position. The machine will not propel with the parking brake on.

**Reverse:** Pull the lever down into the Reverse position.
**OPERATION**

**THROTTLE LEVER**
The throttle lever controls the engine RPM. Move the throttle lever till the tachometer shows the desired engine RPM for transporting or sweeping. See the TACHOMETER section of this manual.

Fast: Push the lever forward.

Idle: Pull the lever backward.

**VARIO SWEEPING BRUSH LOCK PIN (OPTION)**
The Vario Sweeping Brush lock pin keeps the brush arm locked in the storage position during transport of the machine, or when the brush is not being used. Unlock the brush arm before using the Vario Sweeping Brush.

Unlock: Pull out the hair cotter pin out of the end of the lock pin.

Lock: Insert the lock pin and secure with the hair cotter pin.

**WARNING:** Brush linkage pinch points. Stay clear when linkage is moving.

**VARIO SWEEPING BRUSH TILT/ARM SWITCH (OPTION)**
The Vario Sweeping Brush tilt/arm switch transfers the joystick control between the sweeping brush tilt controls and the sweeping brush arm movement controls.

Brush Tilt: Press the left side of the switch to control the brush tilt with the joystick.

Brush Arm: Press the right side of the switch to control the brush arm movement with the joystick.
**VARIO SWEEPING BRUSH JOYSTICK (OPTION)**

The Vario Sweeping Brush joystick controls the Vario Sweeping Brush tilt and the Vario Sweeping Brush™ arm movement.

When the Vario Sweeping Brush tilt/arm switch is set to the brush tilt position, the Vario Sweeping Brush joystick will control the angle of the sweeping brush.

**Tilt Brush Front Edge Down:** Move and hold the lever forward until the brush has moved into the desired position.

**Tilt Brush Rear Edge Down:** Move and hold the lever back until the brush has moved into the desired position.

**Tilt Brush Left:** Move and hold the lever to the left until the brush has moved into the desired position.

**Tilt Brush Right:** Move and hold the lever to the right until the brush has moved into the desired position.

**WARNING:** Brush linkage pinch points. Stay clear when linkage is moving.

When the Vario Sweeping Brush tilt/arm switch is set to the sweeping brush arm position, the Vario Sweeping Brush joystick will control the movement of the sweeping brush arm.

**Swing Sweeping Brush Arm Left:** Move and hold the lever forward until the arm swings into the desired position.

**Swing Sweeping Brush Arm Right:** Move and hold the lever back until the arm swings into the desired position.

**Slide Sweeping Brush Arm Left:** Move and hold the lever to the left until the arm slides into the desired position.

**Slide Sweeping Brush Arm Right:** Move and hold the lever to the right until the arm slides into the desired position.

**WARNING:** Brush linkage pinch points. Stay clear when linkage is moving.
OPERATION

VARIO SWEEPING BRUSH ON–OFF SWITCH (OPTION)
The Vario Sweeping Brush on–off switch controls the power of the sweeping brush and also determines the direction of brush rotation.

On (right hand sweep): Push the right side of the switch. The brush will turn on and rotate in a counter-clockwise direction.

On (left hand sweep): Push the left side of the switch. The brush will turn on and rotate in a clockwise direction.

Off: Place the switch in the middle position. The brush turn off.

VARIO SWEEPING BRUSH RAISE–LOWER SWITCH (OPTION)
The Vario Sweeping Brush raise–lower switch controls the height of the sweeping brush.

Lower brush: Push the left side of the switch. The brush will lower to ground level into the free-floating position.

Raise brush: Press and hold the right side of the switch. Release the switch when the brush is raised to the desired height.
BRIGHT HEADLIGHTS LIGHT
The bright headlights light comes on when the headlights are on the bright setting.

PARKING BRAKE LIGHT
The parking brake light comes on when the parking brake is set. The light on the parking brake switch will also come on when the parking brake is set. Refer to the PARKING BRAKE SWITCH section of this manual.

SIGNAL LIGHT
The signal light arrows flash when the turn signals are used or when the 4-way warning lights are on.
GLOW PLUG LIGHT
The glow plug light comes on when the ignition switch is turned counter-clockwise to the accessories position. The light will go out when the engine is ready to start, usually 5 to 30 seconds depending on the weather conditions.

CLOGGED ENGINE AIR FILTER LIGHT
The clogged engine air filter light comes on when the engine air filter gets clogged. To clean the filter, see AIR FILTER in the MAINTENANCE section of this manual.

WATER TANK LOW LIGHT (OPTION)
The water tank low light comes on when the water tank level is low. The water pump will shut off soon after this light comes on. If the machine is equipped with a high pressure washer option, it’s pump will also shut off if this light comes on.

⚠️ WARNING: Flammable materials can cause explosion or fire. Do not use flammable materials in tank. Only use water.
VACUUM WAND DOOR LIGHT (OPTION)
The vacuum wand door light comes on when the vacuum wand door is closed. Make sure the vacuum wand door is open and the vacuum wand door light is off before sweeping with the machine.

HOPPER OVERLOAD LIGHT
The hopper overload light comes on when the hopper reached it's weight capacity.

For high dump machines, the hopper light will come on when loaded with more than 1815 kg (4000 lb). When the hopper overload light is on, the hopper can only be tilted to low dump.

For low dump machines, the hopper light will come on when loaded with more than 3175 kg (7000 lb). The hopper should be dumped when the overload light comes on.

HEATER KNOB
The heater knob controls the heater temperature.

Increase: Turn the heater knob clockwise.

Decrease: Turn heater the knob counter-clockwise.
**OPERATION**

**FAN KNOB**
The fan knob controls the fan speed for the heater and air conditioner.

Increase: Turn the fan knob clockwise.

Decrease: Turn the fan knob counter-clockwise.

**NOTE:** This switch does not turn off when the ignition is turned off.

**AIR CONDITIONER KNOB (OPTION)**
The air conditioner knob controls the air conditioner temperature.

Increase The Cool Temperature: Turn the air conditioner knob clockwise.

Decrease The Cool Temperature: Turn air conditioner the knob counter-clockwise.

**NOTE:** The air conditioner will NOT work unless the fan is turned on.

**AIR CIRCULATION VENTS**
There are numerous air circulation vents in the operator cab. There is a set for both the passenger and the driver. If desired, the vents can be closed on the passenger side of the cab for more air flow to the drivers side of the cab. The vents in front of the dash panel are for defrosting.
LOW BRAKE PRESSURE LIGHT

The low brake pressure light indicates low brake pressure. If this light comes on when the machine is started, do not move the machine until the light goes out. If the light comes on during operation of the machine, proceed with caution out of intersections or traffic and park the machine. If brake pressure drops too low, the parking brake will come on automatically and will not release until brake pressure is restored. Contact your service personnel to restore the brake pressure.

INCLINE LIGHT (High Dump Model)

The incline light will come on when the machine is on an incline that is unsafe for high dumping the hopper. It will come on when the front to back incline is more than 11° and the side to side incline is more than 4°. The machine will not high dump when this light is on.

FOR SAFETY: Only dump the hopper on a level surface.
ENGINE SHUTDOWN OVERRIDE SWITCH

The engine shutdown override switch will bypass the high water temperature and low oil pressure shutdown feature. Press and hold the switch both to start and operate the machine. This switch is for use if the machine’s automatic shutdown feature happens in an intersection or in traffic. Do NOT use this switch for more than a few seconds or damage to the engine could occur. See ENGINE WATER TEMPERATURE GAUGE and ENGINE OIL PRESSURE GAUGE sections of this manual.

PARKING BRAKE SWITCH

The parking brake switch sets and releases the front axle as well as disables the propelling system. When the ignition switch is turned off, the parking brake will come on automatically.

NOTE: The hopper lift and tilt switches will not operate unless the parking brake is set or the service brake is applied.

NOTE: The high pressure washer option will not operate unless the parking brake is set.

Set: Press the top part of the parking brake switch. The indicator light in the switch as well as the parking brake light will come on.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine and remove key.

Release: Press the bottom part of the parking brake switch. The indicator light in the switch as well as the parking brake light will turn off.

NOTE: If brake pressure drops too low, the parking brake will come on automatically and will not release until brake pressure is restored. When this happens, this switch will NOT indicate that it is set. See LOW BRAKE PRESSURE LIGHT section of this manual.
LEFT SIDE BRUSH WATER VALVE KNOB (OPTION)

The left side brush water valve knob controls the amount of water spray to the left side brush.

Increase Water Spray: Turn the left side brush water valve knob counter-clockwise.

Decrease Water Spray: Turn the left side brush water valve knob clockwise.

Stop Water Spray: Turn the water valve knob clockwise until it comes to a complete stop to close the water supply. If this is NOT done when the machine is shut off, water will continue to flow.

NOTE: The water pump switch needs to be on for the water valves to operate.

VARIO SWEEPING BRUSH LEFT WATER VALVE KNOB (OPTION)

The Vario Sweeping Brush left water valve knob controls the amount of water spray to the sweeping brush when it is on left side of the machine.

Increase Water Spray: Turn the water valve knob counter-clockwise.

Decrease Water Spray: Turn the water valve knob clockwise.

Stop Water Spray: Turn the water valve knob clockwise until it comes to a complete stop to close the water supply. If this is NOT done when the machine is shut off, water will continue to flow.

NOTE: The water pump switch needs to be on for the water valves to operate.
OPERATION

VARIO SWEEPING BRUSH RIGHT WATER VALVE KNOB (OPTION)
The Vario Sweeping Brush right water valve knob controls the amount of water spray to the sweeping brush when it is on the right side of the machine.

Increase Water Spray: Turn the water valve knob counter-clockwise.

Decrease Water Spray: Turn the water valve knob clockwise.

Stop Water Spray: Turn the water valve knob clockwise until it comes to a complete stop to close the water supply. If this is NOT done when the machine is shut off, water will continue to flow.

NOTE: The water pump switch needs to be on for the water valves to operate.

RIGHT SIDE BRUSH WATER VALVE KNOB (OPTION)
The right side brush water valve knob controls the amount of water spray to the right side brush.

Increase Water Spray: Turn the right side brush water valve knob counter-clockwise.

Decrease Water Spray: Turn the right side brush water valve knob clockwise.

Stop Water Spray: Turn the water valve knob clockwise until it comes to a complete stop to close the water supply. If this is NOT done when the machine is shut off, water will continue to flow.

NOTE: The water pump switch needs to be on for the water valves to operate.
FUSES

Fuses are a one-time protection device designed to stop the flow of current in the event of a circuit overload. This machine uses automotive ATO type fuses. **Never substitute higher value fuses than specified.**

The fuses are located in the fuse box under the fuse cover on the center console.

</table>
ENGINE WATER TEMPERATURE GAUGE

The engine water temperature gauge shows the engine coolant temperature. If the engine coolant temperature is too hot, the LED indicator light will blink. If this happens, stop the engine, locate the problem and have it corrected. If the engine is not turned off, the machine is equipped with an automatic shutdown feature that will turn off the engine. This keeps the engine from being damaged. To override this automatic shutdown, refer to the ENGINE SHUTDOWN OVERRIDE SWITCH section of this manual.

FUEL LEVEL GAUGE

The fuel level gauge indicates how much fuel is in the fuel tank. The LED indicator light will blink when the fuel level is low.

NOTE: Do not let the fuel tank empty completely. Air can enter the fuel system and require bleeding, before the next engine start.

ENGINE OIL PRESSURE GAUGE

The engine oil pressure gauge displays the engine oil pressure. If the oil pressure falls too low, the LED light will blink. If this happens, stop the engine, locate the problem and have it corrected. If the engine is not turned off, the machine is equipped with an automatic shutdown feature that will turn off the engine. This keeps the engine from being damaged. To override this automatic shutdown, refer to the ENGINE SHUTDOWN OVERRIDE SWITCH section of this manual.
VOLTMETER
The voltmeter displays the existing voltage of the battery. When the voltage is not within the normal range – 12 to 14 Volts, the LED light will blink. If this happens, stop operating the machine, locate the problem and have it corrected.

HOURMETER
The hourmeter records the number of hours the machine has been operated. Use this information to determine machine maintenance intervals.

ODOMETER
The odometer records the distance that the machine has been driven. Use this information to determine machine maintenance intervals such as tire wear.

SPEEDOMETER
The speedometer displays the machines travel speed. Use this for determining the proper operating speed for sweeping and transporting.
TACHOMETER

The tachometer consists of a numeric display, an LED visual display, and a green SWEEP light. The numeric display shows the engine RPM. Move the throttle lever till the tachometer shows the desired engine RPM for transporting or sweeping. See the THROTTLE LEVER section of this manual.

The tachometer’s LED visual display indicates when the engine RPM is set for proper sweeping. When the amber LED light is in the middle of the gauge (between the blue markings), the engine throttle is at a proper setting for sweeping. The desired sweeping speed is between 1600 and 2000 RPM. Refer to the chart in the SWEEPING section.

The tachometer’s green SWEEP light will illuminate when the engine RPM is set for proper sweeping. If the engine speed is operating below 1600 RPM, the green SWEEP light will turn off while the sweeping functions will continue to operate. If the engine speed is operating too fast for sweeping (above 2000 RPM), the green SWEEP light will blink and an audio alarm will sound. This will continue for 15 seconds, then the sweeping functions will stop and raise.
SWITCH PANEL
The switch panel contains the switches that control the hopper and sweeping functions. It is located on the front center part of the cab.

HOPPER TILT BACK SWITCH
The hopper tilt back switch tilts the hopper back for dumping debris. It will also stop and raise the sweeping functions. The machine’s travel speed is limited to 5 mph when the hopper is tilted.

NOTE: The hopper lift and tilt switches will not operate unless the parking brake is set or the service brake is applied.

Press and hold the switch until the hopper is in the desired tilted position, then release the switch. An audio alarm will sound when the hopper is moving. The hopper tilt will automatically stop when it is fully titled. The light next to the switch will come on while the hopper is being tilted. This light will flash when the switch is released and the hopper is in a tilted position.

⚠️ WARNING: Lift arm pinch point. Stay clear of hopper lift arms.

HOPPER TILT FORWARD SWITCH
The hopper tilt forward switch tilts the hopper forward after dumping debris. Press and hold the switch until the hopper is fully forward. An audio alarm will sound when the hopper is moving. The light next to the switch will come on only while the switch is being pressed. The hopper is fully forward when the hopper tilt back switch light stops flashing.

NOTE: The hopper lift and tilt switches will not operate unless the parking brake is set or the service brake is applied.

⚠️ WARNING: Lift arm pinch point. Stay clear of hopper lift arms.
OPERATION

HOPPER LIFT SWITCH (High Dump Model)
The hopper lift switch will raise the hopper for high dumping. It will also stop and raise the sweeping functions. The machine’s travel speed is limited to 3 mph when the hopper is in the raised position.

NOTE: The hopper lift and tilt switches will not operate unless the parking brake is set or the service brake is applied.

NOTE: The minimum clearance height needed to high dump the hopper is 5060 mm (16.6 in).

WARNING: High dump vertical clearance. Stay clear of overhead obstructions and power lines.

Press and hold the switch until the hopper is at the desired raised position, then release the switch. An audio alarm will sound when the hopper is moving. The hopper lift will automatically stop when it is fully raised. The light next to the switch will come on while the hopper is being raised. This light will flash when the switch is released with the hopper in a raised position.

NOTE: The hopper will not lift if the optional hopper incline or overload light is on. This indicates that the machine is either on an incline that is unsafe or that the hopper is too heavy for high dumping the hopper.

HOPPER LOWER SWITCH (High Dump Model)
The hopper lower switch lowers the hopper after high dumping. Press and hold the switch until the hopper is fully lowered. An audio alarm will sound when the hopper is moving. The light next to the switch will come on only while the switch is being pressed. The hopper is fully lowered when the hopper lift switch light stops flashing.

NOTE: The hopper lift and tilt switches will not operate unless the parking brake is set or the service brake is applied.

WARNING: Lift arm pinch point. Stay clear of hopper lift arms.
HOPPER DOOR OPEN SWITCH

The hopper door open switch unlatches the hopper door. With the hopper tilted, press and hold the switch for 2–3 seconds. The hopper door will unlatch and open. The light next to the switch will flash when the hopper door is unlatched.

**WARNING:** Hopper door pinch point. Stay clear of hopper door.

HOPPER DOOR CLOSE SWITCH

The hopper door close switch latches the hopper door. With the hopper fully lowered, press and hold the switch for 2–3 seconds. The hopper must be fully lowered for the door to latch. The light next to the switch will come on only while the switch is being pressed. The door is latched when the hopper door open switch light stops flashing.

**WARNING:** Hopper door pinch point. Stay clear of hopper door.

WATER PUMP SWITCH (OPTION)

The water pump switch controls the water pump for the wet dust control system. Press the switch to activate the water pump. The light next to the switch will come on. To turn off the water pump, press the switch again. The light will turn off.

The water pump will shut off automatically when the water tank low light comes on.

**NOTE:** The water valve knobs must be turned open for the wet dust control system to work.
OPERATION

LEFT SIDE BRUSH SWITCH (OPTION)

The left side brush switch controls the left side brush. Press the switch to lower and turn on the left side brush. The light next to the switch will come on. To lift and turn off the left side brush, press the switch again. The light will turn off.

NOTE: The side brushes will automatically turn on with the SWEEP SWITCH if they were in the “on” position when the sweep switch was last turned off.

⚠️ WARNING: Side brush can move. Do not step on side brush.

RIGHT SIDE BRUSH SWITCH

The right side brush switch controls the right side brush. Press the switch to lower and turn on the right side brush. The light next to the switch will come on. To lift and turn off the right side brush, press the switch again. The light will turn off.

NOTE: The side brushes will automatically turn on with the SWEEP SWITCH if they were in the “on” position when the sweep switch was last turned off.

⚠️ WARNING: Side brush can move. Do not step on side brush.

FILTER SHAKER SWITCH

The filter shaker switch controls the hopper dust filter shaker system. It is used to shake clean the dust from the filter. With the throttle in the idle position, press and hold the switch for 1 to 2 seconds to activate the system. The light next to the switch will come on while the filter is shaking. The filter will shake for about 30 seconds, then it will stop and the light will turn off.
CONVEYOR REVERSE SWITCH

The conveyor reverse switch controls the direction of the debris conveyor. The reverse direction is used for unjamming debris clogged in the conveyor and also for cleaning the conveyor. Press the switch to reverse the direction of the conveyor. The light next to the switch will come on. To return the conveyor to the forward sweeping direction, press the switch again. The light will turn off.

NOTE: Do NOT leave the conveyor reverse switch in the reverse position for sweeping.

WARNING: Conveyor throws debris. Conveyor pinch point. Stay clear when in operation.

VACUUM FAN SWITCH

The vacuum fan switch controls the vacuum fan. This switch will come on automatically when the sweep switch is activated. It can be controlled separately without the other sweeping functions. It can be turned on separately for operating the vacuum wand or it can be turned off separately while operating the machine in wet conditions. Press the switch to turn on the vacuum fan. The light next to the switch will come on. Press the switch again to turn the vacuum fan off. The light will turn off.
OPERATION

SWEEP SWITCH

The sweep switch controls the sweeping functions of the machine. These functions include the vacuum fan, the main brush, the conveyor, and side brushes. They do NOT control the Vario brush.

NOTE: The sweep switch can NOT be activated if any of the hopper control switches are lit. The hopper must be in the fully forward and lowered position with the hopper door latched before sweeping.

To start the sweeping functions, press the sweep switch. The vacuum fan will come on, the main brush and conveyor will lower and will also come on. The lights next to these switches will come on. The side brushes will also automatically turn on with the sweep switch IF they were in the on position when the sweep switch was last turned off.

NOTE: If the engine speed is operating too fast for sweeping, the sweeping functions will lift and turn off after 15 seconds. See the TACHOMETER section of this manual.

To stop and raise the sweeping functions, press the sweep switch again. The lights next to these sweeping function switches will turn off.
**4-WAY WARNING LIGHTS SWITCH**

The 4-way warning lights switch powers on and off the warning lights.

**On:** Press the top of the 4-way warning lights switch. The light will come on.

**Off:** Press the bottom of the 4-way warning lights switch. The light will go off.

---

**HAZARD LIGHT SWITCH**

The hazard light switch powers on and off the hazard light.

**On:** Press the top of the hazard light switch. The light will come on.

**Off:** Press the bottom of the hazard light switch. The light will go off.

---

**SIDE BRUSH SPOT LIGHT(S) SWITCH**

The side brush spot light(s) switch powers on and off the side brush spot light(s).

**On:** Press the top of the side brush spot light(s) switch. The light(s) will come on.

**Off:** Press the bottom of the side brush spot light(s) switch. The light(s) will go off.
OPERATION

REAR NIGHT SWEEPING LIGHT SWITCH (OPTION)
The rear night sweeping light switch powers on and off the rear sweeping light.

On: Press the top of the rear night sweeping light switch. The light will come on.

Off: Press the bottom of the rear night sweeping light switch. The light will go off.

FRONT NIGHT SWEEPING LIGHT SWITCH (OPTION)
The front night sweeping light switch powers on and off the front sweeping light.

On: Press the top of the front night sweeping light switch. The light will come on.

Off: Press the bottom of the front night sweeping light switch. The light will go off.

HIGH PRESSURE WASHER SWITCH (OPTION)
The high pressure washer switch powers on and off the high pressure washer.

On: Press the top of the high pressure washer switch. The light will come on.

NOTE: The high pressure washer option will not operate unless the parking brake is set.

Off: Press the bottom of the high pressure washer switch. The light will go off.

FOR SAFETY: When using pressurized air or water, wear eye and ear protection.
**DOME AND MAP LIGHT SWITCH**

The dome and map light switch controls the dome and map light on the ceiling of the cab.

Map Light On: Push the switch toward the passenger side of the cab.

Dome and Map Light On: Pull the switch toward the operator side of the cab.

Off: Place the switch to the middle position.

---

**RADIO AND COMPACT DISK PLAYER (OPTION)**

The radio and compact disk player is located above the operator. Refer to the radio/compact disk player’s manual for operation.

---

**LATCHES**

The cab doors, side doors, and main brush access doors are secured with latches.

Open the Cab Doors: Pull out on the latch handle and turn the latch handle 90°.

Open the Side Doors: Push in the button and pull on the latch handle.

Open the Main Brush Access Doors: Pull on the rubber latch until the door is loose. Remove the door by pulling the door from the pins in the machine frame.
OPERATION

TRAFFIC ADVISOR SIGNAL LIGHT SWITCH (OPTION)
The traffic advisor signal light switch controls the traffic advisor signal light on the back of the machine.

Lights On (High): Press the top of the switch.

Lights On (Low): Press the bottom of the switch.

Off: Press the switch to the middle position.

TRAFFIC ADVISOR SIGNAL LIGHT FUNCTION KNOB (OPTION)
The traffic advisor signal light function knob allows the machine operator to choose between the four different signal light patterns.

Use the traffic advisor signal light function knob to select between the LEFT, RIGHT, SPLIT and FLASH patterns.

The light strip in the lower right hand corner of the controller mirrors the light pattern that is being displayed on the traffic advisor signal light on the back of the machine.
**HOPPER SUPPORT PIN**

The hopper support pin holds the hopper in the tilt back position to allow work under the hopper. **DO NOT** rely on the machine hydraulic system to keep the hopper raised. See *ENGAGING HOPPER SUPPORT PIN* section of this manual.

⚠️ **WARNING:** Raised hopper may fall. Engage hopper support pin.

The hopper support pin is stored on the right rear fender under the hopper.
OPERATION

HOPPER SUPPORT BAR (High Dump Model)
The hopper support bar holds the hopper in the raised position to allow work under the hopper. DO NOT rely on the machine hydraulic system to keep the hopper raised. See ENGAGING HOPPER SUPPORT BAR section of this manual.

⚠️ WARNING: Raised hopper may fall.
Engage hopper support bar.

The hopper support bar is stored on the right side of the lift arms.
HOW THE MACHINE WORKS

The steering wheel (A) controls the direction of machine travel. The directional lever (B) controls the forward/reverse direction. The propelling pedal (C) controls machine speed. The brake pedal (D) slows and stops the machine.

The side brush (E) and vario brush (option) (F) sweep debris into the path of the main brush (G). The main brush (G) sweeps debris from the surface onto the conveyor (H), which transfers the debris into the hopper (I). The vacuum system (J) pulls dust and air through the hopper (I) and the hopper dust filter (K).

The machine has a right side brush (E), an optional Vario Sweeping Brush™ (F), and an optional left side brush. There is also either a wet or dry dust control system.

When sweeping is finished, clean the hopper dust filter (K) and empty the hopper (I).
PRE-OPERATION CHECKLIST

☐ Check the engine oil level.
☐ Check the engine coolant level.
☐ Check the windshield washer fluid level.
☐ Check the radiator and hydraulic cooler fins for debris.
☐ Check the hydraulic fluid level.
☐ Check the air filter indicator.
☐ Check the skirts and seals for damage and wear.
☐ Check the condition of the sweeping brushes. Remove any string, banding, plastic wrap, or other debris wrapped around them.
☐ Check the sweeping brush patterns for adjustment.
☐ Check the condition of the hopper dust filter and seals. Clean as required.
☐ Check the brakes and steering for proper operation.
☐ Check the fuel level.
☐ Empty the debris hopper.
☐ Check the service records to determine maintenance requirements.
OPERATION

STARTING THE MACHINE

1. Check the directional lever to make sure it is in the middle neutral position.

   NOTE: Machine will not start unless the directional lever is in the neutral position.

2. Sit in the operator's seat and fasten the seat belt. Place your foot on the brake pedal or set the parking brake.

   NOTE: The machine will not propel unless the operator is in the seat.

3. Move the throttle lever back to the idle position.
4. Turn the key counter-clockwise. The glow plugs light will come on. When the glow plug light goes out, usually for 5 to 30 seconds depending on the weather conditions, the engine is ready to start.

NOTE: The preheat is not necessary if the temperature is above 10°C (50°F).

5. Turn the ignition switch key clockwise until the engine starts.

NOTE: Do not operate the starter motor for more than 10 seconds at a time or after the engine has started. Allow the starter to cool between starting attempt or damage to the starter motor may occur.

6. Turbo Charged Engines: Allow the engine to operate for at least 30 seconds at low idle before adjusting the throttle lever.

7. Allow the engine and hydraulic system to warm up three to five minutes.

**WARNING:** Engine emits toxic gases. Severe respiratory damage or asphyxiation can result. Provide adequate ventilation. Consult with your regulatory agency for exposure limits. Keep engine properly tuned.

8. Adjust the throttle lever to the desired engine speed.
9. Press the bottom of the parking brake switch to release the parking brake.

10. Place the directional lever in the **Forward** position.

11. Release the brake pedal and press on the propelling pedal to transport the machine. The more foot pressure, the faster the machine will travel.

**NOTE:** The machine will not propel unless the operator is in the seat and the parking brake is released.

12. Drive the machine to the area to be swept. When transporting to the sweeping area and equipped with the Vario Sweeping Brush™, lock the brush into the travel support with the guide pin.

**FOR SAFETY:** When using machine, always follow safety and traffic rules.
OPERATION

SWEEPING AND BRUSH INFORMATION

The model Sentinel has a GVWR of 9072 kg (20,000 lb) or 4536 kg (10,000 lb) per axle. Operate only on surfaces capable of supporting this weight.

Avoid bulky debris such as crates, boxes, tree branches, and very heavy material. Avoid pieces of straps, twine, rope, etc., which could become entangled in brush, brush plugs or the conveyor.

Plan the sweeping in advance. Try to arrange long runs with minimum stopping and starting. Sweep as straight a path as possible. Overlap the brush paths.

Avoid turning the steering wheel too sharply when the machine is in motion. The machine is very responsive to the movement of the steering wheel. Avoid sudden turns, except in emergencies.

Use the wet dust control option in dusty conditions. With wet roads, do not use the wet dust control option.

For best results, use the correct brush type for your sweeping application. The main sweeping brush is a polypropylene brush. The following are recommendations for side brush and Vario Sweeping Brush™.

**Polypropylene and Wire Side Brush** –
Recommended for general purpose sweeping. Best combination of sweeping and aggressiveness.

**Flat Wire Side Brush** – Recommended for outside and curb-side sweeping where soilage is heavy or compacted. The stiff wire bristles dig out soilage. This brush does not sweep as good as the Polypropylene and Wire Side Brush but is recommended for foundry sweeping where heat may melt synthetic bristles.

**Polypropylene Side Brush** – Recommended for sweeping where you cannot have wire fragments. This brush does not sweep as good as the Polypropylene and Wire Side Brush but is recommended for areas such as airports.
SWEEPING

1. Check the switch panel to make sure that all the hopper control lights are off. The hopper must be in a fully lowered and forward position with the hopper door closed before sweeping.

2. Check the switch panel to make sure that the conveyor reverse switch is NOT lit. When the light is NOT on, this indicates that the conveyor is in the forward sweeping direction.

3. When sweeping light litter (leaves or light trash) check that the conveyor stop brackets are flipped back in position on both sides of the machine.
4. Adjust and start the Vario Sweeping Brush if equipped. Refer to the Vario Sweeping Brush section of this manual.

5. Move the throttle lever till the tachometer shows the desired engine RPM for the type of sweeping you are doing. Refer to the following chart.

<table>
<thead>
<tr>
<th>Debris</th>
<th>Engine RPM</th>
<th>Travel Speed</th>
</tr>
</thead>
<tbody>
<tr>
<td>General Debris</td>
<td>1600–1800 RPM</td>
<td>(5–13 kmh) 3–5 mph</td>
</tr>
<tr>
<td>Fine Dust</td>
<td>1500–1800 RPM</td>
<td>(5–13 kmh) 3–5 mph</td>
</tr>
<tr>
<td>Light Debris (Leaves, grass) (Shake filter often)</td>
<td>1800–2000 RPM</td>
<td>(5–13 kmh) 3–5 mph</td>
</tr>
<tr>
<td>Wet Sweeping (Vacuum fan on)</td>
<td>1800–2000 RPM</td>
<td>(5–13 kmh) 3–5 mph</td>
</tr>
<tr>
<td>Heavy Debris</td>
<td>1800–2000 RPM</td>
<td>Slower than 5 kph (3 mph)</td>
</tr>
<tr>
<td>Vacuum Wand (Ear plugs mandatory)</td>
<td>2300–2400 RPM</td>
<td>None</td>
</tr>
</tbody>
</table>

NOTE: Do NOT sweep with engine speed higher than 2000 RPM. If the engine speed is operating above 2000 RPM, the green SWEEP light will blink and an audio alarm will sound. This will continue for 15 seconds, then the main sweeping functions will lift and turn off.
6. Press the sweep switch. This will lower and start the sweeping functions. The lights next to these switches will come on.

**NOTE:** The side brushes will automatically turn on with the SWEEP SWITCH **IF** they were in the **on** position when the sweep switch was last turned off.

7. Start the wet dust control system if equipped. Refer to the wet dust control system section of this manual.

8. Press the side brush switch(es). This will lower and start the side brush(es). The light(s) next to the switch(es) will come on.

**NOTE:** The side brushes will automatically turn on with the SWEEP SWITCH **IF** they were in the **on** position when the sweep switch was last turned off.
9. Press the bottom of the parking brake switch to release the parking brake.

10. Press the propelling pedal and start sweeping.

NOTE: In dusty conditions, periodically place the engine throttle in the idle position and shake clean the hopper dust filter.

11. Stop sweeping if the conveyor overload alarm sounds. This alarm means that either a large object is jammed in the conveyor, that there is too much heavy debris in the conveyor, or that the hopper opening is filled.

   If a large object is jammed in the conveyor, the alarm will sound constantly even after the machine is stopped. To clear the jammed object, stop sweeping, reduce the engine speed, and place the debris lift direction switch in the reverse position until the debris is removed. Then place the switch back in the forward position and continue sweeping.

   If there is too much heavy debris in the conveyor, the alarm will sound constantly until the machine has stopped. This means that the debris must be swept at a slower travel speed.

   If the hopper opening is filled, the alarm will chirp intermittently. The opening can be cleared by redistributing the debris in the hopper. To do this, stop sweeping and tilt the hopper back. Then return the hopper to the sweeping position and continue to sweep.
STOP SWEEPING

1. Press the sweep switch. This will raise and stop the sweeping functions. The lights next to these sweeping function switches will turn off.

2. Stop the wet dust control system if equipped. Refer to the wet dust control system section of this manual.

3. Check to make sure all the sweeping function lights are out. If any lights are lit, press the switch to turn it off.
4. Stop the Vario Sweeping Brush if equipped. Refer to the Vario Sweeping Brush section of this manual.

5. Place the engine throttle in the idle position and press the filter shaker switch to clean the hopper filter. The filter will shake for about 30 seconds. The light next to the switch will come on while the filter is shaking, then turn off.

**NOTE:** Shake the dust filter *before* tilting the hopper.
EMPTYING THE HOPPER

1. Drive the machine slowly to the debris collection site or debris container. Make sure the machine is on level ground before dumping the hopper.

   **FOR SAFETY:** Only dump the hopper on a level surface.

2. Press and hold the brake pedal with your foot, then push the throttle lever forward to increase the engine speed.

   NOTE: The hopper will not lift or tilt unless the parking brake is set or the service brake is applied.

3. For High Dump Model: Press and hold the hopper lift switch until the hopper is at the desired raised position, then release the switch. An audio alarm will sound when the hopper is moving.

   NOTE: The hopper will not lift if the optional hopper incline or overload light is on. This indicates that the machine is either on an incline that is unsafe or that the hopper is too heavy for high dumping the hopper.

   NOTE: The minimum clearance height needed to high dump the hopper is 5060 mm (16.6 in).

   **WARNING:** High dump vertical clearance. Stay clear of overhead obstructions and power lines.
4. Place the directional lever in the reverse position, release the brake and slowly back the machine up to the debris site or container.

FOR SAFETY: Move machine with care when hopper is raised.

5. Press and hold the brake pedal with your foot.

NOTE: The hopper will not lift or tilt unless the parking brake is set or the service brake is applied.

6. Press and hold the hopper tilt back switch until the hopper is in the desired tilted position, then release the switch. An audio alarm will sound when the hopper is moving.
7. Press and hold the hopper door open switch for 2–3 seconds. The hopper door will open and the debris will fall out.

8. Place the directional lever in the forward position, release the brake and slowly drive the machine away from the debris site or container.

    **FOR SAFETY:** Move machine with care when hopper is raised.

9. Press and hold the brake pedal with your foot.

    **NOTE:** The hopper will not lift or tilt unless the parking brake is set or the service brake is applied.
10. Press and hold the hopper tilt forward switch until the hopper is fully forward, then release the switch. An audio alarm will sound when the hopper is moving.

11. Press and hold the hopper door close switch for 2–3 seconds. The hopper door will latch in the closed position.

WARNING: Hopper door pinch point. Stay clear of hopper door.

12. For High Dump Model: Press and hold the hopper lower switch until the hopper is fully lowered, then release the switch. An audio alarm will sound when the hopper is moving.
13. Check the switch panel to make sure that all the hopper control lights are off. The hopper must be in a fully lowered and forward position with the hopper door closed before sweeping again.

STOP THE MACHINE

1. Stop sweeping. Refer to the STOP SWEEPING section of this manual.

2. Take your foot off the propelling pedal. Step on the brake pedal.

3. Move the throttle lever back to the idle position.

4. Turbo Charged Engines: Allow the engine to operate for at least 30 seconds at low idle before shutting the engine off.
5. Press on the top part of the parking brake switch to set the parking brake.

6. Turn the ignition switch key counter-clockwise to stop the engine. Remove the switch key.

**FOR SAFETY:** Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine and remove key.

7. Turn off all accessories such as lights, water valves, and the cab fan. Even with the machine off, many of these accessories will continue to operate unless turned off.
POST-OPERATION CHECKLIST

- Check the engine oil level.
- Check the engine coolant level.
- Check the radiator and hydraulic cooler fins for debris.
- Check the hydraulic fluid level.
- Check the air filter indicator.
- Check the skirts and seals for damage and wear.
- Check the condition of the sweeping brushes. Remove any string, banding, plastic wrap, or other debris wrapped around them.
- Check the sweeping brush patterns for adjustment.
- Check the condition of the hopper dust filter and seals. Clean as required.
- Lubricate the conveyor chain.
- Check the brakes and steering for proper operation.
- Check the fuel level.
- Empty the debris hopper.
- Check the service records to determine maintenance requirements.
ENGAGING HOPPER SUPPORT PIN

1. Press on the top part of the parking brake switch to set the parking brake.

   FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine and remove key.

2. Start the engine and push the throttle lever forward to increase the engine speed.

3. Press and hold the hopper tilt back switch until the hopper is in the fully tilted position. An audio alarm will sound when the hopper is moving.

   NOTE: The hopper will not lift or tilt unless the parking brake is set or the service brake is applied.
4. Remove the hopper support pin from the storage location on the right rear fender and place it into the hole of the hopper support cylinder.

**WARNING:** Raised hopper may fall. Engage hopper support pin.

5. Pull the throttle lever back to the idle position, then turn the ignition switch key counter-clockwise to stop the engine. Remove the switch key.

6. Turn the ignition switch key counter-clockwise to stop the engine. Remove the switch key.

**FOR SAFETY:** Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine and remove key.
**OPERATION**

**DIENGAGING HOPPER SUPPORT PIN**

1. Remove the hopper support pin and fasten it in the storage location on the right rear fender.

   **WARNING:** Lift arm pinch point. Stay clear of hopper lift arms.

2. Start the engine and push the throttle lever forward to increase the engine speed.

3. Press and hold the hopper tilt forward switch until the hopper is the fully forward. An audio alarm will sound when the hopper is moving.

   **NOTE:** The hopper will not lift or tilt unless the parking brake is set or the service brake is applied.

4. Pull the throttle lever back to the idle position, then turn the ignition switch key counter-clockwise to stop the engine. Remove the switch key.
ENGAGING HOPPER SUPPORT BAR (High Dump Model)

1. Press on the top part of the parking brake switch to set the parking brake.

   FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine and remove key.

2. Start the engine and push the throttle lever forward to increase the engine speed.

3. Press and hold the hopper lift switch until the hopper is in the fully raised position, then release the switch. An audio alarm will sound when the hopper is moving.

   NOTE: The hopper will not lift or tilt unless the parking brake is set or the service brake is applied.

4. Remove the hopper support bar from the storage location on the right side of the lift arms.
5. Install the support bar from the rear of the machine by first placing it behind the horizontal bar of the lift arms.

**WARNING:** Raised hopper may fall.
Engage hopper support bar.

6. Align the tabs of the support bar with the shaft of the lift arms. The longer tabs go toward the front of the machine.

7. Place the base part of the support bar on top of the lift cylinders. Then release the bar.

8. Pull the throttle lever back to the idle position, then turn the ignition switch key counter-clockwise to stop the engine. Remove the switch key.
**DISENGAGING HOPPER SUPPORT BAR**  
*(High Dump Model)*

1. Remove the support bar from lift arms and fasten it in the storage location on the right rear fender.

**WARNING:** Lift arm pinch point. Stay clear of hopper lift arms.

2. Start the engine and push the throttle lever forward to increase the engine speed.

3. Press and hold the hopper lower switch until the hopper is fully lowered, then release the switch. An audio alarm will sound when the hopper is moving.

**NOTE:** The hopper will not lift or tilt unless the parking brake is set or the service brake is applied.

4. Pull the throttle lever back to the idle position, then turn the ignition switch key counter-clockwise to stop the engine. Remove the switch key.
OPERATION

OPERATION ON INCLINES

Drive the machine slowly on inclines and make sure your seat belt is fastened. Use the brake pedal to control machine speed on descending inclines.

The maximum rated incline when driving the machine with the hopper down is 11° (20%).

Do not drive the machine on inclines with the hopper raised.

**FOR SAFETY: Move machine with care when hopper is raised.**

The incline light will come on when the machine is on an incline that is unsafe for high dumping the hopper. It will come on when the front to back incline is more than 11° (20%) and the side to side incline is more than 4°. The machine will not high dump when this light is on.
OPTIONS

VARIO SWEEPING BRUSH

The Vario Sweeping Brush allows side brush sweeping on the left or right side of the machine. The brush arm moves along the front of the machine. The brush angle, movement, front and side tilt, and direction of rotation are adjusted for the right or left side.

NOTE: The brush arm is locked to the front of the machine during transport. Make sure to take the hair cotter pin from the lock pin before the brush is operated.

WARNING: Brush linkage pinch points. Stay clear when linkage is moving.

1. Start the brush with the Vario Sweeping Brush on–off switch. Push the right part of the switch to rotate the brush counterclockwise. Push the left part of the switch to rotate the brush clockwise.

2. Move the Vario Sweeping Brush from the storage position with the joystick. Then use Vario Sweeping Brush tilt/arm switch and the joystick to move the brush to the desired left–right and up–down position.
3. Set the Vario Sweeping Brush tilt/arm switch to the sweeping brush arm position. Slide or swing the Vario Sweeping Brush to the right or left side of the machine as needed with the Vario Sweeping Brush joystick.

4. Set the Vario Sweeping Brush tilt/arm switch to the brush tilt position and adjust the front and side angle of the brush with the Vario Sweeping Brush joystick.
WET DUST CONTROL SYSTEM

The wet dust control system is useful in dusty conditions to control the dust created by the side brushes and Vario Sweeping Brush. The system consists of a water tank, a water pump, and spray nozzles for each of the side brushes.

1. Press on the top part of the parking brake switch to set the parking brake and turn the machine off.

   FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine and remove key.

2. Fill the water tank. The fill spout is located in behind the engine access door on the right side of the machine.

   WARNING: Flammable materials can cause explosion or fire. Do not use flammable materials in tank. Only use water.

3. The water level can easily be seen on the side of the water tank. The water tank is located behind the access door on the left side of the machine.
4. Start the machine and turn on the water pump with the water pump switch. The light next to the switch will come on.

5. Adjust the amount of water spray to each of the brushes with the water valve knobs. Turn the water valve knob clockwise until it comes to a complete stop to close the water supply. If this is NOT done when the machine is shut off, water will continue to flow.

NOTE: The water pump switch needs to be on for the water valves to operate.

6. The optional water tank low light will come on when the water level is low in the tank. The water pump will shut off soon after this light comes on.

NOTE: Do not use the water system on wet roads. Turn off the water pump and water valves.
VACUUM WAND

The vacuum wand uses the machine's vacuum system to allow the pick-up of debris that is out of reach of the machine.

1. Press on the top part of the parking brake switch to set the parking brake.

   **FOR SAFETY:** Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine and remove key.

2. Press and hold the hopper tilt back switch until the hopper is tilted enough to allow the vacuum door to open.

   **NOTE:** The hopper will not lift or tilt unless the parking brake is set or the service brake is applied.

3. Remove the vacuum wand door tool from the storage location on the right rear fender.

   **WARNING:** Lift arm pinch point. Stay clear of hopper lift arms.
OPERATION

4. Close the vacuum door with the vacuum wand door tool. Place the tool back in its storage location under the hopper.

WARNING: Conveyor throws debris. Conveyor pinch point. Stay clear when in operation.

NOTE: Do not engage sweep mode while the vacuum wand door is covering the conveyor opening. Damage to the machine can occur.

5. Press and hold the hopper tilt forward switch until the hopper is fully forward.

NOTE: The hopper will not lift or tilt unless the parking brake is set or the service brake is applied.

6. Press the vacuum fan switch to turn on the vacuum fan. The light next to the switch will come on.
7. Move the throttle lever until the engine speed is between 2300 – 2400 RPM.

**WARNING:** Machine can emit excessive noise. Consult with your regulatory agency for exposure limits. Hearing loss can result. Wear hearing protection.

8. Remove the wand from the hopper door and vacuum as required.

9. Place the vacuum wand back on the hopper door when finished.

10. Pull the throttle lever to the idle position.

11. Press the vacuum fan switch to turn off the vacuum fan. The light next to the switch will turn off.

12. Press and hold the hopper tilt back switch until the hopper is in the fully tilted position.

13. Open the vacuum door with the vacuum wand door tool. Place the tool back in the storage location on the right rear fender.

**WARNING:** Lift arm pinch point. Stay clear of hopper lift arms.

14. Press and hold the hopper tilt forward switch until the hopper is fully forward.
CAB JACK

The cab jack allows the cab to be raised without the aid of an overhead hoist or crane.

1. Press on the top part of the parking brake switch to set the parking brake and turn the machine off.

   **FOR SAFETY:** Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine and remove key.

2. Secure or remove all loose items from inside the cab.

3. Disconnect both door springs from the back of the cab. The springs can remain attached to the doors.

4. Block the windshield wiper hose with a small cable tie or clamp.
5. Remove the hardware securing the rear of the cab.

6. Locate the cab jack handle near the left door of the machine. Insert it into the cab jack, twist the handle clockwise, and pump the cab to the fully elevated position. Engage the cab support bar.

**WARNING:** Raised cab may fall. Engage cab support bar.

7. To lower the cab, disengage the cab support bar and twist the handle counter clockwise.

8. Reinstall the hardware to secure the cab, remove the cable tie from the windshield wiper fluid hose, and reinstall both door springs to the back of the cab.
**OPERATION**

**TILTING THE CAB (MANUALLY)**

The cab can be tilted forward to access components under the cab. The cab must be tilted manually with an overhead hoist if the machine is not equipped with the cab jack option.

**CAUTION; DO NOT ATTEMPT TO TILT THE CAB WITHOUT THE USE OF AN OVERHEAD MOTORIZED TROLLEY HOIST.**

**FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, and turn off machine.**

1. Secure or remove all loose items from inside the cab.

2. Disconnect both door springs from the back of the cab. The springs can remain attached to the doors.

3. Block the windshield wiper hose with a small cable tie or clamp.
4. Remove the hardware securing the rear of the cab.

5. Attach a chain from the overhead hoist to the hook on the top rear part of the cab. Tilt the cab far enough to engage the cab support bar.

6. Align the lower hole of the support bar with the machine frame, then engage the cab support bar by installing the pin into lower hole.

**WARNING:** Raised cab may fall. Engage cab support bar.

7. Keep the chain from the overhead hoist attached as added support.

</table>

**NOTE:** Change the hydraulic fluid, filter, and suction strainer, indicated (*), after every 800 hours for machines NOT originally equipped with **TennantTrue** premium hydraulic fluid. (See Hydraulics section).

**NOTE:** Also check procedures indicated (***) after the first 50-hours of operation, and procedures indicated (**) after the first 250 hours of operation.

**LUBRICANT/FLUID**

- **UTF** . . . Universal tractor fluid (Mobil 424)
- **EO** . . . Engine oil, API diesel classification CG4 or better
- **HYDO** . **TennantTrue** premium hydraulic fluid or equivalent
- **WBG** . . . Waterproof bearing grease (TENNANT part no. 765819)
- **WG** . . . Distilled water, coolant conditioner (TENNANT part no. 770172) and permanent-type ethylene glycol anti-freeze, −34° C (−30° F)
- **WF** . . . Automotive-type windshield washer fluid
- **GL** . . . SAE 90 weight gear lubricant (Grade GL5)

**NOTE:** More frequent intervals may be required in extremely dusty conditions.
NOTE: Lettered references for lubrication section of manual pages 89 thru 94.
MAINTENANCE

A. HOPPER TILT (LOW DUMP)

The hopper tilt has eight grease fittings. Four grease fittings are located on the tilt cylinders, one on each end of the two cylinders. Two grease fittings are located on the hopper safety support cylinders, one at each end. The last two grease fittings are located at the hopper tilt pivot, one on each side. Lubricate these fittings with Waterproof Bearing grease (TENNANT part no. 765819) after every 100 hours of operation.

⚠️ WARNING: Raised hopper may fall.
Engage hopper support pin.

B. HOPPER LIFT/TILT (HIGH DUMP OPTION)

The high dump hopper lift has thirteen grease fittings. Four grease fittings are located on the upper tilt cylinders, one on each end of the two cylinders. Two grease fittings are located on the lower lift cylinders, one at each base. One grease fitting is located at the top of the hopper safety support cylinder. Two grease fittings are located at the hopper tilt pivot, one on each side. The last four grease fittings are located on the cross shaft pivots of the hopper lift arms, one at each of the four pivots. Lubricate these fittings with Waterproof Bearing grease (TENNANT part no. 765819) after every 100 hours of operation.

⚠️ WARNING: Raised hopper may fall.
Engage hopper support bar.

C. AXLE LEAF SPRINGS

The axle leaf springs have twelve grease fittings. Lubricate with Waterproof Bearing grease (TENNANT part no. 765819) after every 200 hours of operation.
D. STEERING CYLINDER
Each steering cylinder has one grease fitting. Lubricate with Waterproof Bearing grease (TENNANT part no. 765819) after every 200 hours of operation.

E. WHEEL PIVOTS POINTS
The wheel pivots points have eight grease fittings. Lubricate with Waterproof Bearing grease (TENNANT part no. 765819) after every 200 hours of operation.

F. SIDE BRUSH PIVOT
Each side brush pivot has a grease fitting. Lubricate with Waterproof Bearing grease (TENNANT part no. 765819) after every 200 hours of operation.
**G. VARIO SWEEPING BRUSH (OPTION)**

The brush pivot has two grease fittings. Lubricate with Waterproof Bearing grease (TENNANT part no. 765819) after every 200 hours of operation.

**H. CONVEYOR BEARINGS**

There are four bearing grease fittings. Lubricate daily with Waterproof Bearing grease (TENNANT part no. 765819).
I. CONVEYOR CHAIN

The conveyor chains should be lubricated with engine oil daily.

Remove the access covers on the sides of the conveyor. Run the conveyor in reverse at idle. Oil the chain making sure to lubricate the o-rings on the chain. Put the access covers back on the sides of conveyor.

FOR SAFETY: When servicing machine, avoid moving parts. Do not wear loose jackets, shirts, or sleeves.

J. ENGINE

Check the engine oil level daily. The engine oil dipstick can be accessed behind the right side engine access door.

Change the engine oil and oil filter after the first 50 hours of operation, then after every 250 hours of machine operation after that. Use 10W30 API CG4/CH4, ACEA E3/E5 rated engine oil.

The engine oil drain is accessed through the right side door.

Fill the engine with oil to the level indicated on the oil dipstick. The engine oil capacity is 11.7 L (12.4 qt) including the oil filter.

FOR SAFETY: When servicing machine, avoid moving parts. Do not wear loose jackets, shirts, or sleeves.
K. DIFFERENTIAL

Check the lubricant level in the differential after every 400 hours of operation by removing the filler plug.

Change the differential lubricant after every 1600 hours of operation. Use SAE 90 weight gear lubricant.

L. MAIN BRUSH SUPPORT RODS

The main brush support rods have a total of eight grease fittings, four on each side. Lubricate with Waterproof Bearing grease (TENNANT part no. 765819) daily.
HYDRAULICS

HYDRAULIC FLUID RESERVOIR

The reservoir is located on the right side of the machine next to the engine.

Check the hydraulic fluid level at operating temperature daily. Make sure the hopper is down when checking hydraulic fluid level. The sight gauge is marked with full, the black line, and add, the red line, levels to indicate the level of hydraulic fluid in the reservoir.

**ATTENTION!** Do not overfill the hydraulic fluid reservoir or operate the machine with a low level of hydraulic fluid in the reservoir. Damage to the machine hydraulic system may result.

 Mounted on top of the reservoir is a filler cap with a built-in breather. Replace the cap after every 800 hours of operation.

Lubricate the filler cap gasket with a film of hydraulic fluid before putting the cap back on the reservoir.

Drain and refill the hydraulic fluid reservoir with new **TennantTrue** premium hydraulic fluid after every 2400 hours of operation. Machines have a blue colored drop (left photo) on the hydraulic fluid label if originally equipped with **TennantTrue** premium hydraulic fluid.

**NOTE:** Change the hydraulic fluid, filter, and suction strainer after every 800 hours for ALL machines that have NOT consistently used **TennantTrue** premium hydraulic fluid or equivalent.
MAINTENANCE

The reservoir has a built-in strainer outlet that filters hydraulic fluid before it enters the system. Replace the strainer after every 2400 hours of operation.

The hydraulic fluid filter gauge is located in front of the hydraulic filter, on top of the hydraulic reservoir. Make sure the fluid is at operating temperature and the machine is at 2000 RPM to ensure a proper reading.

Replace the hydraulic fluid filter element after every 1200 hours of operation, or when the hydraulic filter gauge reads outside of the green area.

REPLACING HYDRAULIC FLUID FILTER

The reservoir is located on the right side of the machine next to the engine.

1. Loosen or remove the hydraulic reservoir breather cap.

2. Remove the hydraulic fluid reservoir filter cover.

3. Allow the oil to drain from the filter into the tank. (Allow to drain for approx. 5 minutes).

4. Lift the filter and internal bowl out of the reservoir and place into an oil pan. Remove the top part of the filter element.
5. Pour out any residual oil into the oil pan.

6. Remove and replace the filter element.

7. Replace the new filter element and internal bowl assembly back into the hydraulic fluid reservoir.

HYDRAULIC FLUID

There are two fluids available for different temperature ranges:

<table>
<thead>
<tr>
<th>Part number</th>
<th>Ambient air temperature</th>
<th>ISO Grade</th>
<th>Viscosity Index (VI)</th>
<th>Capacity</th>
</tr>
</thead>
<tbody>
<tr>
<td>1057707</td>
<td>all temperatures</td>
<td>ISO 32</td>
<td>VI 163 or Higher</td>
<td>3.8 L (1 gal)</td>
</tr>
<tr>
<td>1057708</td>
<td>all temperatures</td>
<td>ISO 32</td>
<td>VI 163 or Higher</td>
<td>19 L (5 gal)</td>
</tr>
<tr>
<td>9000119</td>
<td>all temperatures</td>
<td>ISO 68</td>
<td>VI 158</td>
<td>19 L (5 gal)</td>
</tr>
</tbody>
</table>
If using a locally-available hydraulic fluid, be sure the specifications match the Tennant hydraulic fluid specifications. Substitute fluids can cause premature failure of hydraulic components.

Synthetic fluids offer several advantages. Synthetic fluids can operate in a wider range of extreme temperatures. This feature is advantageous in states with wide seasonal temperature changes.

**NOTE: DO NOT Mix Synthetic Hydraulic Fluid With TENNANT TRUE Premium Hydraulic Fluid.**

**ATTENTION!** Hydraulic components depend on system hydraulic fluid for internal lubrication. Malfunctions, accelerated wear, and damage will result if dirt or other contaminants enter the hydraulic system.
HYDRAULIC HOSES

Check the hydraulic hoses every 200 hours of operation for wear or damage.

Fluid escaping at high pressure from a very small hole can be almost invisible, and can cause serious injuries.

See a doctor at once if injury results from escaping hydraulic fluid. Serious infection or reaction can develop if proper medical treatment is not given immediately.

FOR SAFETY: When servicing machine, use cardboard to locate leaking hydraulic fluid under pressure.

If you discover a fluid leak, contact your mechanic/supervisor.

PURGING AIR FROM THE HYDRAULIC CONVEYOR LIFT SYSTEM

If a hydraulic component in the lift system has been replaced, air will get into the hydraulic fluid. This air must be purged from the system.

Purge air from the hydraulic system after a hydraulic component in the lift system has been changed. To purge air from the hydraulic system, start the machine and press the sweep switch to lower the conveyor. Leave the machine in the sweep mode and shut off the machine to collapse the lift cylinders. Turn the ignition switch to ON, but do not start the engine. Press the sweep switch to activate solenoid valve (SV31) on the control block, allowing hydraulic fluid to flow through the valve. Disconnect the hose from the top fitting of the right lift cylinder and drain the hydraulic fluid into a pan to purge air from the hose. Reconnect the hose to the right lift cylinder. Disconnect the hose from the top fitting of the left lift cylinder and drain the hydraulic fluid into a pan to purge air from the hose. Reconnect the hose to the left lift cylinder. Start the engine and check hydraulic system for leaks. Cycle the sweep mode and observe the conveyor lift for proper operation.
MAINTENANCE

ENGINE

COOLING SYSTEM

Check the radiator coolant level daily in the overflow reservoir. Use distilled water mixed with a permanent-type, ethylene glycol antifreeze to a $-34\,^\circ C$ ($-30\,^\circ F$) rating. Add coolant to the overflow reservoir. Add one pint of conditioner (TENNANT part no. 770172) to each coolant change.

**FOR SAFETY:** When servicing machine, avoid contact with hot engine coolant.

Check the radiator hoses and clamps every 200 hours of operation. Tighten the clamps if they are loose. Replace the hoses and clamps if the hoses are cracked, harden, or swollen.

Check the radiator core exterior and hydraulic cooler fins for debris daily. If the machine is equipped with air conditioning, check the condenser as well. The condenser hinges out for cleaning. Blow or rinse all dust, which may have collected on the radiator or condenser, in through the grille and radiator fins, opposite the direction of normal air flow. Be careful not to bend the cooling fins when cleaning. Clean thoroughly to prevent the fins becoming encrusted with dust. Clean the radiator, cooler, and condenser only after they have cooled to avoid cracking.

**FOR SAFETY:** When using pressurized air or water, wear eye and ear protection.

**ATTENTION!** Do not wash the fuel injection pump or turbocharger when the engine is running or warm. This could damage these components.

Flush the radiator and the cooling system every 1600 hours of operation, using a dependable cleaning compound. Add one pint of conditioner (TENNANT part no. 770172) to each coolant change.
AIR FILTER

The engine air filter housing has an end cap, a rubber dust cap and a dry cartridge-type air filter element. Check the dust cap every 100 hours of operation to make sure it is expelling dust. Replace the dust cap if the rubber is worn.

The air filter element must be replaced whenever it is damaged. Inside the air filter element is a safety element. Replace this element, do not clean it, after the regular element has been damaged or changed three times.

Replace the air filter element only when the clogged engine air filter light shows restriction in the air intake system. Do not remove the air filter element from the housing unless it is restricting air flow.

On standard engines, install the end cap on the air filter housing with the rubber dust cap facing downward. On turbo engines, the dust cap is on the housing.
MAINTENANCE

AIR INTAKE SCREEN
Check the air intake screen for obstructions daily. It is located on top of the engine air cleaner.

FUEL FILTER
The fuel filter has an element that filters impurities from the diesel fuel. It is located on the conveyor side of the engine.

Replace the fuel filter element after every 250 hours of operation.

FOR SAFETY: Keep flames and sparks away from fuel system service area. Keep area well ventilated.

FUEL WATER SEPARATOR
The fuel water separator separates water from the diesel fuel. It is located on the bottom of the fuel filter.

Open the separator daily to allow any accumulated water to drain out.
**FUEL LINES**
Check the fuel lines every 50 hours of operation. If the clamp band is loose, apply oil to the screw of the band, and securely tighten the band.

The fuel lines are made of rubber, and may become worn out whether the engine has been used much or not. Replace the fuel lines and clamp bands every two years.

**FOR SAFETY:** Keep flames and sparks away from fuel system service area. Keep area well ventilated.

If the fuel lines and clamp bands are found worn or damaged before two years’ time, replace or repair them at once. When the fuel lines are not installed, plug both ends with clean cloth or paper to prevent dirt from entering the lines. Dirt in the lines can cause fuel injection pump malfunction.

**ENGINE VALVE**
Engine valve lash adjustment is required after the first 250 hours of operation, then after every 1000 hours of operation after that. Allow the valves to cool before checking valves.

Refer to the manufacturer’s maintenance manual.
MAINTENANCE

CAB FILTERS

The fresh air cab filters are located in the front of the cab.

⚠️ WARNING: Brush linkage pinch points. Stay clear when linkage is moving.

Clean these filters with soap and water. Check and clean the cab filters after every 50 hours of operation. Replace when necessary.

WET DUST CONTROL FILTER (OPTION)

The wet dust control filter is located under the cab between the front wheels.

Clean the water filter every 200 hours of operation by removing it and flushing it with clean water.
WINDSHIELD WIPER BLADES

Check the windshield wiper blades for wear every 200 hours of operation. Replace when necessary.

WINDSHIELD WASHER FLUID

The windshield washer fluid is located behind the operator cab and can be accessed through the right engine access door. Check the windshield washer fluid level daily. Fill with automotive-type windshield washer fluid.

BATTERY

The battery is located behind the operator cab and can be accessed through the right engine access door.

After the first 50 hours of operation, and every 200 hours after that, clean and tighten the battery connections.

FOR SAFETY: When servicing machine, avoid contact with battery acid. Wear eye and ear protection.

NOTE: When the battery is disconnected, the parking brake will come on automatically.
BELTS AND CHAINS

ALTERNATOR/FAN BELTS

The alternator/fan belts are driven by the engine crankshaft pulley and drive the alternator pulley. Proper belt tension is 10 mm (0.40 in) from a force of 4 to 5 kg (8 to 10 lb) applied at the mid-point of the longest span.

Check and adjust the belt tension every 100 hours of operation.

FOR SAFETY: When servicing machine, avoid moving parts. Do not wear loose jackets, shirts, or sleeves.

AIR CONDITIONER BELT (OPTION)

The air conditioner belt is driven by the engine crankshaft pulley and drives the compressor. Proper belt tension is 4 mm (0.19 in) from a firm force of a finger applied at the mid-point of the longest span.

Check and adjust the belt tension after the first 10 hours of operation and then every 100 hours after that.

FOR SAFETY: When servicing machine, avoid moving parts. Do not wear loose jackets, shirts, or sleeves.

STATIC DRAG CHAIN

A static drag chain prevents the buildup of static electricity in the machine. The chain is attached to the machine at the rear main brush skirt.

Make sure the chain is touching the floor at all times.
DEBRIS HOPPER

HOPPER DUST FILTER

The hopper dust filter filters the air pulled up from the hopper. The dust filter is equipped with a shaker to remove the accumulated dust particles. To clean the dust filter, with the engine in the idle position, press the filter shaker switch.

Shake the dust filter before tilting or dumping the hopper and at the end of every work shift. When sweeping in dusty conditions, shake the filter more often.

Filters may become plugged up with mud and heavy material when sweeping in wet conditions. Light fiberous material can also become inbedded in between the filter pleats.

TO CLEAN THE HOPPER DUST FILTER

1. Stop the engine and set the machine parking brake.
2. Tip the hopper back and release the hopper door.
3. Secure the door with the door support cable.
4. Use a garden hose or broom to clean the hopper filter from the inside of the hopper.

TO REMOVE OR REPLACE HOPPER DUST FILTER

1. Stop the engine and set the machine parking brake.
   
   **FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine and remove key.**

2. Remove the top hopper cover.
3. Remove the nuts holding the filter shaker frame in the hopper.
4. Pull the filter shaker frame and filter out of the hopper.
5. Drill out the rivets holding the filter to the shaker frame.
MAINTENANCE

6. Put the new separators into the new filter bag pockets.

7. Take the rods out of the old filter, and put them in the new filter.

8. Put the filter into the shaker frame.

9. Stretch the filter over the edges of the shaker frame. Pull the drawstring tight.

10. Drill and rivet the filter to the shaker frame.

11. Put the filter shaker frame and filter in the hopper.

12. Install the retaining nuts for the filter shaker frame and tighten.

13. Check the seals on the top hopper cover and the hopper. Replace any that is worn or damaged.

14. Put the top hopper cover back on the hopper. Make sure the cover has a good seal before tightening the hardware.

THERMO SENTRY

The Thermo Sentry senses the temperature of the air pulled up from the hopper. It is located at the rear of the hopper. If the air temperature in the hopper reaches 71° ± 3° C (160° ± 5° F), the Thermo Sentry stops the vacuum fan and cuts off the air flow. The sweeping functions will stop, the brushes will raise and the vacuum fan icon will start blinking.

The Thermo Sentry will automatically reset when the air temperature in the hopper falls below 60° ± 3° C (140° ± 5° F).
CONVEYOR

The conveyor transports debris picked up by the main brush to the hopper, by means of a paddle system. Check tension, clean and lubricate the conveyor chain daily. To lubricate, refer to the Conveyor Chain in the Lubrication section of this manual.

The conveyor chain is tensioned automatically while operating, with the hydraulic cylinders. When the sweeping system is turned off, the conveyor is equipped with a locking ratchet mechanism to keep the conveyor chain from disengaging the drive sprockets.

As the conveyor chain wears, the locking ratchet mechanisms move up the pins mounted on the slide rails on both sides of the machine. Clean the ratchet mechanisms daily. Check the ratchet tips and pins for damage and wear daily.

Check the conveyor skirts and paddles for damage and wear daily.

**WARNING:** Conveyor throws debris. Conveyor pinch point. Stay clear when in operation.

Clean the conveyor thoroughly with a garden hose daily. To do this, tilt the hopper back engage the hopper tilt support bar, and turn the machine power off. Remove the top conveyor panel from rear of the conveyor to access the inside of the conveyor.

**FOR SAFETY:** When servicing machine, wear eye and ear protection when using pressurized air or water.
MAINTENANCE

BRUSHES

MAIN BRUSH

The main brush is cylindrical and spans the width of the machine, sweeping debris into the conveyor, which deposits the debris into the hopper.

Check the brush daily for wear or damage. Remove any string or wire tangled on the main brush, main brush drive hub, or main brush idler hub.

Check the main brush pattern daily. Refer to the TO CHECK AND ADJUST MAIN BROOM PATTERN section of the manual. The pattern should be 100 to 125 mm (4 to 5 in) wide. Adjust the main brush pattern with the main brush down pressure nut located under the hopper.

Replace the brush when it no longer cleans effectively.

TO REPLACE MAIN BRUSH

1. Park the machine on level ground and set the machine parking brake.

2. Press the sweep switch to lower the main brush.

3. Stop the engine.

   **FOR SAFETY:** Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine and remove key.

4. Remove the right side main brush access door.
5. Remove the hardware holding the skid plates to the brush idler plate.

6. Remove the hardware holding the links to the brush idler plate.

7. Remove the brush chains and the skid chain.
8. Remove the hardware holding the idler plate onto the machine.

9. Remove the brush idler plate.

10. Grasp the main brush; pull it off the brush drive plug and out of the main brush compartment.

11. Put the new brush on the ground next to the access door.

12. Slide the main brush onto the drive plug. Rotate the brush until it engages the drive plug, and push it all the way onto the plug.

13. Slide the main brush idler plate plug onto the main brush.

14. Mount the idler plate onto the machine with the hardware removed earlier.

15. Mount the brush chains and the skid chain.

16. Mount the links to the idler plate with the hardware removed earlier.

17. Mount the skid plates to the idler plate with the hardware removed earlier.

18. Put the right side main brush access door back on the machine.

19. Check and adjust the main brush pattern.
TO CHECK AND ADJUST MAIN BRUSH PATTERN

1. Park the machine on level ground and set the machine parking brake.

2. Press the sweep switch to lower and start the main brush. Allow the brush to rotate in one place for 2 minutes.

3. Press the sweep switch again to raise and stop the main brush.

4. Drive the machine off the test area.

5. Observe the width of the brush pattern. The proper brush pattern width is 100 to 125 mm (4 to 5 in) along the entire length of the brush pattern.

6. To increase the width of the main brush pattern, turn the main brush down pressure nut counter-clockwise.

   To decrease the width of the main brush pattern, turn the main brush down pressure nut clockwise.
MAINTENANCE

SIDE BRUSH
The side brush sweeps debris along edges into the path of the main brush.

Check the brush daily for wear or damage. Remove any string or wire found tangled on the side brush or side brush drive hub.

The side brush pattern is set at the factory.

Replace the brush when it no longer cleans effectively.

TO REPLACE SIDE BRUSH
1. Raise and stop the side brush.

2. Stop the engine and set the machine parking brake.

   **FOR SAFETY:** Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine and remove key.

3. Remove the dry dust control skirt assembly (option) if equipped.

4. Remove the side brush retaining hardware holding the brush to the drive hub.

   **WARNING:** Side brush can move. Do not step on side brush.

5. Mount the new side brush to the drive hub with the hardware removed earlier.

6. Check the sidebrush linkage for wear and loose hardware.
SKIRTS AND SEALS

BRUSH ACCESS DOOR SKIRTS
The brush access door skirts are located on the bottom and front of each of the two main brush access doors. The bottom skirts should touch the skid plates on either side of the machine.

Check the skirts for wear or damage daily.

DRY DUST CONTROL SKIRTS (OPTION)
The dry dust control skirts (option) are mounted over the side brushes on each side of the machine. The skirts should clear the ground by less than 3 mm (0.125 in).

Check the skirts for wear or damage daily.

BRUSH COMPARTMENT REAR SKIRT
The brush compartment skirt is located at the rear of the brush compartment. The skirt should clear the ground by 3 mm (0.125 in).

Check the skirt for wear or damage daily.

NOTE: Tire pressure and a full hopper will affect skirt clearances.
MAINTENANCE

CONVEYOR SKIRTS
The conveyor has a lip skirt located at the bottom rear of the conveyor and two side skirts. The skirts should touch the ground when the conveyor is lowered into the sweeping position.

Check the skirts for wear or damage daily.
Replace the skirts when they no longer touch the ground.

NOTE: Tire pressure and a full hopper will affect skirt clearances.

DOOR SEALS
The brush access doors have seals located along their door edges.

Check the seals for wear or damage every 100 hours of operation.

The cab doors have seals located along their door edges.
Check the seals for wear or damage every 100 hours of operation.
CONVEYOR SEALS
The conveyor seals are located on the machine frame where the conveyor makes contact with the frame.

Check the seals for wear or damage every 100 hours of operation.

HOPPER SEALS
The hopper seals are located on the hopper door, the hopper filter cover, the dust filter, and the front opening of the hopper.

Check the seals for wear or damage every 100 hours of operation.
MAINTENANCE

SKIDS

SKIDS
The skids are located on either side of the brush compartment. They skim the ground when the conveyor is lowered into the sweeping position and are designed to contain debris between the main brush and the conveyor lip.

Check the skids for wear after every 100 hours of operation. The skids should be replaced when the thickness is less than 1 mm (0.04 in).

The skids are attached to the upper plate by means of a rubber gusset that absorbs shock. Check the rubber gussets every 100 hours of operation for damage or wear.

BRAKES AND TIRES

SERVICE BRAKES
This machine is equipped with wet multi-disc service brakes located on all four wheels. These brakes are filled with universal tractor fluid (Mobil 424). The fill/check ports are located on the side of the wheel hubs. The drain ports are located on the bottom of the wheel hubs. The fluid level should be checked after every 400 hours of operation. Change the fluid after every 1600 hours of operation.

PARKING BRAKE
The parking brake is set with the parking brake switch. The dry multi-disk brake unit is located between the differential and the propelling motor.
TIRES

The machine tires are pneumatic. The wheels consist of a 3-piece rim, flap, tube and tire.

Check the tire pressure every 50 hours of operation. The proper tire air pressure is:

<table>
<thead>
<tr>
<th>Tire Type</th>
<th>Pressure Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bias ply tire</td>
<td>930–1000 kPa (135–145 psi)</td>
</tr>
<tr>
<td>Radial tire</td>
<td>930–1000 kPa (135–145 psi)</td>
</tr>
</tbody>
</table>

NOTE: The machine is equipped with 3-piece rims. If the tire pressure falls below 550 kPa (80 psi), the tire and wheel assembly should be brought to an industrial tire service center for repair and/or refilling.

Check the tires for wear and rotate every 200 hours of operation.

WHEEL ALIGNMENT

When the machine has been used for some time, a number of things can cause the steering system from tracking properly. Large temperature swings, continual turning in only one direction and cylinder leakage. The front axle is equipped with a hydraulic valve for aligning the wheels. This should be done after every 50 hours of operation or when the machine is not tracking properly.

To align the wheels, start the machine and while moving slowly forward, turn the steering wheel fully right. Stop and apply the parking brake. Find the red valve handle and place it on the steering valve located on the front axle. Open the valve by turning the handle 90° in the counter-clockwise direction. Release the parking brake and while slowly moving forward turn the steering wheel full left then full right. Stop, set the parking brake and close the valve by turning the handle 90° in the clockwise direction.

NOTE: It is important for the machine to be moving while turning so that there is no wind up on the side wall of the tires.

Remove the red valve handle and store for future use. Drive the machine straight forward 100–200 ft before turning. This will settle the system.

WHEEL NUTS

Check the wheel nut torque on the four wheels every 100 hours of operation. The proper torque is 260 – 305 Nm (190 – 225 ft lb).
PUSHING, TOWING, AND TRANSPORTING THE MACHINE

PUSHING OR TOWING THE MACHINE
If the machine becomes disabled, it can be pushed from the rear or pulled from the front.

The propelling pump has bypass valves to prevent damage to the hydraulic system when the machine is being pushed or towed. **The ignition switch must be turned to the on position to release the parking brake before pushing or towing.** DO NOT exceed 1.6 kmh (1 mph) or 30 meters (100 feet) in distance when moving the machine. The bypass feature is to be used in case of machine breakdown. DO NOT move the machine for any great distance or damage will occur to the propel pump even though the bypass valves are engaged.

**ATTENTION! Do not push or tow machine for a long distance and without using the bypass valve, or the machine hydraulic system may be damaged.**

Loosen the nuts on the by-pass valves with a 13 mm wrench. Turn in the set screws with a 4 mm allen wrench until they are below the surface of the nut. Tighten the nuts.

When finished pushing or towing, loosen the nuts on the bypass valves with a 13 mm wrench. Turn out the set screws with a 4 mm allen wrench until they top out. Tighten the nuts.
TRANSPORTING THE MACHINE

1. Position the front of the machine at the loading edge of the truck or trailer.

   **FOR SAFETY:** Use truck or trailer that will support the weight of the machine.

**NOTE:** Empty the hopper and water tank before transporting the machine.

2. If the loading surface is not horizontal or is higher than 380 mm (15 in) from the ground, use a winch to load machine.

   If the loading surface is horizontal AND is 380 mm (15 in) or less from the ground, the machine may be driven onto the truck or trailer.

3. To winch the machine onto the truck or trailer, attach the winching chains into the front channel of the machine frame.

4. Open the bypass valves before winching the machine onto the truck or trailer. See PUSHING OR TOWING THE MACHINE section of this manual. Make sure the machine is centered.

   **FOR SAFETY:** When loading machine onto truck or trailer, use winch. Do not drive the machine onto the truck or trailer unless the loading surface is horizontal AND is 380 mm (15 in) or less from the ground.

5. Position the machine onto the truck or trailer as far as possible. If the machine starts to veer off the centerline of the truck or trailer, stop and turn the steering wheel to center the machine.
6. Set the parking brake and block the machine tires. Tie down the machine to the truck or trailer before transporting.

   The front tie-down locations are on the inside channels of the main frame.

   The rear tie-down locations are through the rear channels of the main frame.

7. If the loading surface is not horizontal or is higher than 380 mm (15 in) from the ground, use a winch to unload machine.

   If the loading surface is horizontal AND is 380 mm (15 in) or less from the ground, the machine may be driven off the truck or trailer.

   **FOR SAFETY: When unloading machine off truck or trailer, use winch. Do not drive the machine off the truck or trailer unless the loading surface is horizontal AND 380 mm (15 in) or less from the ground.**
MACHINE JACKING

You can jack up the machine for service at the designated locations. Use a Hoist or jack that will support the weight of the machine; a 4-ton jack for empty hopper, and a 6-ton jack with full hopper. It is best to empty the hopper and water tank before jacking the machine.

Always stop the machine on a flat, level surface and block the tires before jacking up the machine.

The front jacking locations are the front axle.

The rear jacking locations are the rear axle.

FOR SAFETY: When servicing machine, block machine tires before jacking machine up.

FOR SAFETY: When servicing machine, jack machine up at designated locations only. Block machine up with jack stands.
STORING MACHINE

Before storing the machine for an extended period of time, the machine needs to be prepped to lessen the chance of rust, sludge, and other undesirable deposits from forming. Contact TENNANT service personnel.

1. Cover the engine air intake.
2. Cover the engine exhaust.
3. Disconnect the battery.
4. Fill the fuel tank and add a fuel stabilization product.

NOTE: A cover storage kit is available to provide an easy way to cover the machine.

FREEZE PROTECTION FOR WET DUST CONTROL SYSTEM

1. Open the water valve knobs on the dash panel to drain the lines.
2. Drain the water tank with the drain valve located under the tank.
3. Drain the water lines and pump by opening the drain valve at the water pump under the cab.
4. Remove the water filter cap, located next to the water pump, and empty it.
5. Leave the valves open if the machine is to be stored, or not used for an extended period.

FREEZE PROTECTION FOR THE HIGH PRESSURE WASHER OPTION

1. Flush the pump with a 50/50 mixture of antifreeze and water before winter storage.
