BD 750

BR 750

Incredible maneuverability and pick-up ability, with uncompromising big scrubber power and capacity

750 SERIES

An automatic scrubber is all about efficiency. Cleaning faster, better, and less often saves labor and allows you to maintain your facility's appearance and direct resources elsewhere. Many competitive units leave water behind and force the operator to go back for a second pass, or worse, follow behind with a mop. The BR and the BD 750 Scrubbers outperform them all when it comes to true efficiency. A 37" squeegee and powerful vac motor picks up dirty water like no other. Perfect for retail stores, light industrial facilities, health care, and educational applications, the 750 Series has a sleek design that offers the user dramatically improved sightlines, ease of service, and durability for the rigors of everyday use.

BD 750

This 28" unit utilizes twin traditional disc brushes or pads and has both a solution and a recovery tank capacity of 21 gallons.

High-Performance Features

- Brushless vac motor design prolongs motor life
- Electronic float shut-off protects the unit from flooding
- Compact profile allows turns in narrow hallways
- Tank-in-tank design
- Easy to clean recovery tank
- Choice of disc brush or cylindrical brush units

Disc brushes and disc pads

The BD 750 can be fitted with a variety of optional scrub brushes - a time-proven solution for smooth floors.

The BD 750 is equipped standard with pad holders. When used with the appropriate pad, this is the ideal solution to daily maintenance cleaning.

With 200 RPM, tank-in-tank design, and pad holders, batteries, and charger included with the unit, the BD 750 comes ready to use. The machine yields brilliant results when it comes to daily maintenance cleaning.

BR 750

This 26" machine offers what is rapidly becoming an industry favorite cylindrical brush cleaning. Concentrated brush/pad pressure and 1500 RPM brush speed allow not only daily maintenance and basic cleaning, but deep scrubbing as well. This offers a unique advantage on structured surfaces such as quarry tile, paver bricks, and raised rubber disc flooring. Like its BD counterpart, the BR 750 has 21-gallon tanks, 37" squeegee, and comes packaged with batteries and charger. A variety of brush and pad options are sold separately and available for shipment with the unit.

BD 750

BR 750

Cylindrical brushes and pads

The BR units come standard with black brushes for daily cleaning operations. A variety of brushes are available for high performance on structured flooring.

The BR units can be fitted with a unique roller shaft that accepts individual pads. Each pad can be changed if damaged without the need to replace an entire single pad.

750 SERIES OF AUTOMATIC SCRUBBERS

Service friendly

The key service components are easily accessed for maintenance needs. Both units come packaged complete with batteries and charger.

Operator-friendly

A digital data display, emergency stop, and comfort-designed handles are simple to use and comfortable to operate.

Versatile

The BR and BD 750 are ideal for car dealerships, schools, athletic facilities, retail stores, and other areas where high foot traffic is a reality and floor care standards are a must.

Innovative

The tank-in-tank design reduces the profile of the unit and allows quick and easy access to the tanks for filling, emptying, and cleaning.
